

I CLAIM:

1. A baluster comprising:

a first connecting section including a first external thread adapted to be connected threadedly to a handrail;

5 a second connecting section adapted to be connected to a support base; and

an intermediate section disposed between said first and second connecting sections.

2. The baluster as claimed in Claim 1, wherein said second connecting section is an upright rod section.

3. The baluster as claimed in Claim 1, wherein said intermediate section includes a decorative part.

4. The baluster as claimed in Claim 1, wherein said second connecting section includes a second external thread opposite to said first external thread and adapted to be connected threadedly to the support base, said first and second external threads being reversed relative to each other.

5. The baluster as claimed in Claim 1, wherein said second connecting section includes a bottom flanged end, and a plurality of through holes formed in said bottom flanged end.
